

## **LUIS documentation:**

The LUIS application is stored in the “BBC\_Micro\_ver3.3.json” file, in JSON format.

The start of the file contains application details including the list of intents and the list of entities with their descriptions. This is followed by a list of all labelled utterances used by the application.

A comprehensive documentation is provided by Microsoft here:

<https://github.com/Microsoft/Cognitive-Documentation/tree/master/Content/en-us/LUIS>

Programmatic API documentation is provided here:

<https://dev.projectoxford.ai/docs/services/5890b47c39e2bb17b84a55ff/operations/5890b47c39e2bb052c5b9c2f>

In order to access the full functionality of the application and make changes to it, the file must be imported as a new application using the “Import” functionality. Note that this will generate a new application ID.
